Acknowledgement

I would like to express my gratitude to all those who gave me the possibility to complete this project. We want to thank the Indian Council of Medical Research for giving us permission to commence this work and providing us all facilities, to do the necessary research work. We furthermore thank the present Secretary DHR and Director General ICMR, Dr VM Katoch for the encouragement to carry out academic activities. We would also like to put this on record our gratitude towards Dr K Satyanarayana, Scientist 'G' and Head, Publications & Information Division of the Council who encouraged us to go ahead with our Project and extended unstinted support.

We are deeply indebted to NSTMIS Division of Department of Science & Technology, Government of India, for providing the Funds for carrying out the work. Our heartfelt thanks are due to Dr Rakesh Chetal and Ms Namita Gupta (DST) whose helps, stimulating suggestions and encouragement helped us in all the time of research.

We are highly indebted to the Chairperson of Local Project Advisory Committee Dr S. S. Murthy Former Director DESIDOC and to, other LPAC members of the committee for their constructive support and guidance towards formulation, execution and the final culmination of the project. We would like to extend our heartfelt thanks to experts in the field for their valuable suggestions and providing the needed support for collecting the data about the journals and including details & academic support.

We will be failing in our duties if we do not mention the organizations which provided support towards capturing and acquiring the data for development of the CD, namely Preeti Sinha (WOS), Lalit Saini, Manager, CABI South-Asia, India, Authorities at NCL Pune, BARC Library, Tata Institute of Social Studies, Asiatic Library Mumbai, Forest Research Institute Dehradun, NISCAIR, NISTADS, NML, JNU Library, NIHF Library, NPL, AIIMS Library, Delhi University Central & Science Library, ICAR, IARI Library, ISI Delhi Library, ICSR Library, IIT Delhi and Roorkee, NASDOC Library, Institution of Engineers Delhi, DESIDOC, and other libraries of ICMR network and Institutes from India..

Thanks are also due to our colleagues from the ICMR Headquarters, Sreekumar, Vikesh Kumar Sapra, KV Ratnakar (ALIO, ICMR Headquarter) and Library staff for their help, support, interest and valuable hints. Last but not the least, our gratitude is due to the administrative staff of the council, particularly Mrs Daya Mallik AO (Publication & Information Division).

Preamble

The scholarly communication system is the instrument by which the results of individual, private research projects are transformed into scientific knowledge. New scientific information, however original and earthshaking, does not become scientific knowledge until it has been communicated, criticized, verified, and remains unfalsified, by other scientists in the same field. Societies play a significant role in scholarly communication. Primary publications contain the work of contemporary scholars who are contributing to the advancement of their subject. For example, serials (Periodicals or Journals) are publications that appear in a continuing series of issues, usually at regular intervals, under the same distinctive title. Periodicals or Journals contain the latest work in a given field and cover topics too small to warrant book treatment.

With this assumption, the work on “Directory of Indian Periodicals (DIP 2010)”- a Directory of Journals and Periodicals published in India in the areas of Science, Technology and Medicine along with Agriculture Journals, was conceived and executed by Indian Council of Medical Research, India and funded by NSTMIS Division of Department of Science and Technology, Government of India in a Project Mode.

As we all know, each field or subfield in a discipline will organize into membership-based societies. These societies take it upon themselves to serve the scholarly needs of the field by developing standards, inculcating ethical conduct, publishing scholarly output of the members, and upholding quality through the process of peer review. During peer review, papers considered for publication in scholarly journals are “refereed or reviewed” at least by two anonymous peer reviewers prior to acceptance for publication.

Reviews or Review Articles synthesize important research into a connected account of scientific progress. They assist the scientists to assimilate current material relevant to their subject. Specialized review series often have the words “Advances”, “Progress”, or “Annual Review” as lead titles.

Letter Journals rapidly publish very brief reports of outstanding and essentially revolutionary new discoveries. They cater short communications, not necessarily of great significance, but sufficiently self-contained to be useful to specialists of the respective field. There is a pressure to get into print quickly and sometimes clarity and completeness of proof suffer in these articles.

Conference Papers/Proceedings are shortened, abridged extensively, versions of work that is about to be or has been published elsewhere. They also may contain invited papers which typically give a review of the current situation but can be biased by the personal opinion of the speaker.

Reports, usually government documents, are sometimes called Ephemera or Grey literature. Mostly, ephemera or Grey literature is not available through regular channels. Examples include report literature, technical notes and specifications, some conference proceedings and preprints, translations, official publications, supplementary publications and data, trade

literature, etc. Grey literature may have poor print quality and layouts, have missing or incomplete bibliographic information, and are published in limited print runs. Patents are legal documents filed with a government's patent and trade office to protect the financial value of proprietary information. Full disclosure of materials, methods, and claims are made in patents. Patents may contain significant scientific information.

This directory provides comprehensive bibliographical information of the India's scientific and technical "periodicals information" in "Science & Technology includes Medical and Agriculture, electronics, communications, engineering, computers and computing, and information technology. It also has significant coverage in areas such as materials science, oceanography, nuclear engineering, geophysics, biomedical engineering, and biophysics. The efforts have been made to include as many communication channels *eg.* Serials, Journals, Advances, Progress, Annual Review, Letter Journals, Reports, Published Conference Proceedings , as was available.

Details of addresses, editor's name and inclusion of journals in secondary services were obtained from the original journal (wherever possible), Ulrich's International Periodicals Directory (2008), List of Journals indexed in MEDLINE (2008), list of journals abstracted in EMBASE (2008), list of journals included in BIOSIS (2007), Indian Science Abstracts, Tropical Diseases Bulletin, WoS, Chemical Abstracts, COMPENDEX and INSPEC (2008).

The Directory contains 2412 selected periodicals being published from India. The coverage of individual journals in various secondary services indicates that the maximum journals are covered in Indian Science Abstract (ISA) 63.17% followed by WoS 4.75%, SCOPUS 9.33%, Tropical Disease Bulletin (TDB) 8.34%, MEDLINE 1.65%, BIOSIS 7.96% EMBASE 4.27%, INSPEC 2.61%, Chemical Abstract (CA), 1.16%, COMPENDEX 0.91% and Physics Abstract 0.87%.

In the hard copy, journals are arranged alphabetically according to abbreviations as per MEDLINE or BIOSIS and wherever applicable abbreviations according to BIS (Bureau of Indian Standards). The Directory contain (i) Journal Index (Subject Category wise); (ii) Journals according to place of publication; (iii) Web address of Journals; (iv) Journal covered by different secondary services; (v) Email address (wherever available). The 'Directory' is also available in searchable electronic database format on a CD also an INTERNET version.

Online vs. print

There are obvious advantages in maintaining a fully searchable electronic edition of the 'Directory' with hundreds of click-through Web links to external links and email addresses, and regular updating. Moreover, providing information as an online resource allows multiple users to access the contents concurrently, and from a place of their own choosing. However, a well-organized compact, and portable print reference work that pulls together a broad range of information otherwise available only through consultation of many separate sources, is still the best reference tool for many users.

As Jill Young-Coelho, Librarian for sub-Saharan Africa at Harvard University, has stated in her essay "Once, Present (and Always?) Africana Acquisitions Strategies" (1900) "...print has its advantages. It sits quietly on a table, can be consulted backward and forward by merely flipping pages, does not crash, and does not require a connection of any sort." She goes on to say, bearing in mind libraries in Africa, "this last advantage is an important one for libraries without reliable Internet access. The original browsing can be done in the book, and online time can be focused on a few sources."

Information has been collected and verified from original source, wherever possible. Updating and verifying existing entries, particularly for online resources, journals, organizations, publishers, has been a time-consuming task. Quite apart from changes in personnel and contact information, URLs and email addresses do change frequently as may be, many institutions move from various host servers to their own new domains. This was one of the biggest limitation of this work. Suggestions are welcome to improve the Directory to make it more useful to users.

Scope & Coverage of DIP:

Broad subject coverage: The subject scope of *DIP* is ‘Science & Technology including Medicine’ broadly defined to encompass those areas of the life sciences, behavioral sciences, chemical sciences, and engineering needed by professionals and others engaged in basic & applied research in the field of science and technology, environmental studies, Atmosphere, earth sciences, environmental pollution, ecology, different aspects of forestry, clinical care, public health, health policy development, or related educational activities. The ‘Directory’ also covers life sciences vital to researchers, and educators, including aspects of biology, environmental science, marine biology, plant and animal science as well as biophysics and biochemistry. A large number of journals have been included from the field of Mathematical side and Computers along with Physical Sciences and some journals from Agricultural side.

The majority of the publications covered in *DIP* are scholarly journals; a small number of newsletters, bulletins, some selected periodicals and some house magazines, considered useful to particular segments of *DIP*’s broad user community are also included.

Coverage of Journals by Secondary Services:

INSPEC: More than 4,000 international scientific and technical journals, 2,000 conference proceedings, and numerous books, reports and dissertations are scanned each year by INSPEC for inclusion in the database. It currently contains over 7 million records and adds 350,000 records per year.

Physics Abstracts, a comprehensive physics index is a part of INSPEC. All records include an English language title and abstract. Links to full text are provided when available.

MEDLINE (Medical Literature Analysis and Retrieval System Online) is the U.S. National Library of Medicine’s (NLM) premier bibliographic database that contains over 16 million references to journal articles in life sciences with a concentration on biomedicine. A distinctive feature of MEDLINE is that the records are indexed with NLM’s Medical Subject Headings (MeSH).

The great majority of journals are selected for MEDLINE based on the recommendation of the Literature Selection Technical Review Committee (LSTRC), an NIH-chartered advisory committee of external experts analogous to the committees that review NIH grant applications. Some additional journals and newsletters are selected based on NLM-initiated reviews, e.g., history of medicine, health services research, AIDS, toxicology and environmental health, molecular biology, and complementary medicine, that are special priorities for NLM or other NIH components. These reviews generally also involve consultation with an array of NIH and outside experts or, in some cases, external organizations with which NLM has special collaborative arrangements.

MEDLINE is the primary component of PubMed, part of the Entrez series of databases provided by NLM's National Center for Biotechnology Information (NCBI). MEDLINE may also be searched via the NLM Gateway.

Currently, citations from approximately 5,200 worldwide journals in 37 languages; 60 languages for older journals. Citations for MEDLINE are created by the NLM, international partners, and collaborating organizations.

CAS Databases

The most authoritative and comprehensive source for chemical information. CAS monitors, indexes, and abstracts the world's chemistry-related literature and patents, updates this information daily, and makes it accessible through state-of-the-art information services. CAS databases offer many scientific disciplines, including biomedical sciences, chemistry, engineering, materials science, agricultural science, and more. This is the only integrated scientific resource of journals and patent information and the databases provide millions of journal article references from more than 10,000 major scientific journals worldwide and patent and patent family references from 60 patent authorities around the world.

Compendex

Compendex is the most authoritative database of abstracted and indexed literature in engineering and the applied physical sciences. Its coverage of virtually every engineering discipline gives researchers confidence that when they search Compendex, valuable information is not overlooked. Indexed specifically for engineers using the Engineering Index Thesaurus, Compendex search results are consistently accurate and relevant to engineering research. Engineering Village's powerful search tools leverage Compendex's controlled vocabulary, making it quick and easy for users to refine their searches and gain insight from results.

The Ei Compendex database is the machine-readable version of Engineering Index, which provides abstracted information from the world's significant engineering and technological literature. Ei Compendex provides worldwide coverage of more than 4,500 journals and selected government reports and books. Subjects include: civil, energy, environmental, geological, and biological engineering; electrical, electronics, and control engineering; chemical, mining, metals, and fuel engineering; mechanical, automotive, nuclear, and aerospace engineering; computers, robotics, and industrial robots. In addition to journal literature, there are more than 480,000 records of significant published proceedings of engineering and technical conferences formerly indexed in Ei Engineering Meetings.

BIOSIS

BIOSIS Provides the data to prepare research projects, grant proposals and follow trends in the life sciences. BIOSIS Previews combines journal content from Biological Abstracts with supplemental, non-journal coverage from Biological Abstracts/RRM (Reports, Reviews, Meetings). Specialized indexing helps to discover more accurate, context-sensitive results. The information is available in virtually every life sciences discipline, including traditional biology (botany, ecology, zoology), interdisciplinary subjects (biochemistry, biomedicine, and biotechnology), and related areas such as instrumentation and methods. BIOSIS Previews is

updated weekly, with 500,000 records added annually. Over 5,000 journals, as well as non-journal literature.

Broad & Specific Subjects areas covered by BIOSIS are:

Life Sciences, Biology, General; Neurology; Neuroscience; Physiology; Agronomy; Biochemistry & Biophysics; Cell Biology; Genetics; Zoology; Multidisciplinary Life & Medical Sciences; Earth & Environmental Sciences; Food Science & Technology; Microbiology; Anatomy; Developmental Biology; Plant Sciences; Embryology; Histology; Molecular Biology; Neuroanatomy; Pharmacology; Science, General

Scopus

Scopus is the largest abstract and citation database of peer-reviewed literature and quality web sources with smart tools to track, analyze and visualize research. Nearly 18,000 titles from more than 5,000 international publishers, including coverage of 16,500 peer-reviewed journals (inc > 1,200 Open Access journals), 600 trade publications, 350 book series, Extensive conference coverage (3.6 million conference papers), 40 million records

Scopus also offers full integration of the scientific web in its search results, with 435 million scientific web pages, 23 million patents from 5 patent offices (US Patent and Trademark Office, European Patent Office, Japan Patent Office, World Intellectual Property Organization and UK Intellectual Property Office), "Articles-in-Press" from over 3,000 journals, Over 80 selected sources e.g. institutional repositories, digital archives and special subject collections made individually searchable via Selected Sources tab.

Tropical Diseases Bulletin

Tropical Diseases Bulletin is the leading bibliographic and abstracts database for research on infectious diseases and public health in developing countries and the tropics. The Bulletin has been providing the latest information on infectious diseases and public health from epidemiology to diagnosis, therapy to disease prevention for nearly 100 years with a particular focus on patients and populations in the developing world, tropics and subtropics. Local as well as international papers are featured. As well as tropical medicine, it also includes related aspects of travel medicine and the health of marginalized populations: immigrants, refugees and indigenous peoples. The Tropical Diseases Bulletin is updated weekly online, delivering highly-targeted, searchable summaries covering key English and non-English language journal articles, reports, conferences, theses and books. Created and indexed by subject specialists Tropical Disease Bulletin provides access to these abstracts alongside comprehensive indexing and classification codes. The database includes a fully searchable backfile to 1990 of over 195,000 abstracts with approximately 11,000 new records added each year. Tropical Diseases Bulletin is also available in print as a monthly journal with author, subject and serials cited indexes. The print backfile goes back to 1912 and was made into a fully searchable electronic database as part of the Global Health Archive.

EMBASE

EMBASE Classic is an essential abstract and index backfile, available for the first time online, which enables biomedical researchers to review critical research from 1947 to 1973. Excerpta Medica Titles covered include • Pharmacology and Toxicology (1965-1973) • Anatomy, Anthropology, Embryology, Histology (1947-1973) • Physiology, Biochemistry, Pharmacology (1948-1973) • Endocrinology (1947-1973) • Internal Medicine (1947-1973) •

Biochemistry, Clinical Biochemistry (1965-1973) • Anaesthesiology (1966-1973) • Ophthalmology (1947-1973) • Tuberculosis, Pulmonary Diseases, Chest Diseases, Thoracic Surgery & Tuberculosis (1948-1973) (For a complete list of titles, please refer to www.info.embaseclassic.com).

The Database covers over 3000 international Journal source titles, 1.8 million records covering 27 years of biomedical research. Available as one file .Abstracts are available for over 90% of records.

ISA

Indian Science Abstracts (ISA) is a semi-monthly abstracting journal which has been reporting scientific work done in India since 1965. Original research articles short communications, review articles, and informative articles published in current scientific and technical periodicals, proceedings of conferences and symposia, monographs and other publications, as well as patents, standards and theses are reported in ISA.
